

Project Case Study

NIER Project – August 2015

Assurance Trees was contracted by Hansen Yuncken in August 2015 to conduct clearing and grubbing work on the University of Newcastle NIER (Newcastle Institute of Energy and Resources) Project. This project involved the following aspects:

- Submission of pre-works WHSQ&E documentation
- Inductions and site familiarisation
- Site establishment and barriers
- Felling and chipping of all trees within the approved areas, stockpiling mulch in accordance with site environmental management system
- The work was completed by a team of 5-6 arborists/tree workers within 4 days from commencement
- Due to the narrow clearing corridor, there was many trees that required expert felling and rigging skills to minimise the damage to the sensitive protected forests surrounding the approved clearing area
- Total value of the project was approximately \$36,000.00 with project variations
